DIAGNOSTIC REPORT
Report ID: D222827D
Date: 01 Sep 2026, 01:54 PM

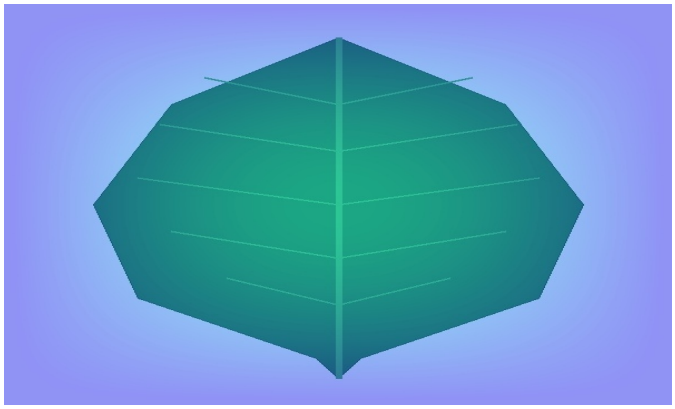

Farmer: Ramesh Gowda | **Location:** Mysuru, Karnataka | **Crop Analyzed:** Tomato

DIAGNOSED CONDITION:	**Healthy Crop *(Solanum lycopersicum)***
Confidence Level:	**95.8%** (EfficientNetB3 Saliency)
Severity Rating:	**NONE** (Estimated affected canopy: **1.8%**)
Pathogen Class:	Optimal Health

Original Leaf Specimen

Explainable Grad-CAM Heatmap Attention

Clinical Symptoms & Biological Cause

Symptoms: Vibrant green leaves, uniform chlorophyll distribution, intact cuticle, no chlorosis, lesions, or necrosis detected.

Etiology/Cause: Balanced nutrition and optimal crop management.

Recommended Treatment Protocol

Treatment Type	Prescription & Application Details
Organic / Bio-Control	Maintain balanced organic matter with vermicompost and foliar seaweed extract (2ml/L) for sustained vigor.
Chemical / Fungicide	No fungicide or bactericide required. Continue balanced NPK fertigation schedule. **Dosage:** Seaweed liquid extract 2ml/L as booster. **Frequency:** Monthly maintenance.
Preventive Measures	Regular scout monitoring, optimal soil moisture sensor monitoring, preventive neem spray once a month.
